BUSINESS QUESTION

Did separating the two websites improve engagement?

In February 2022, The Recording Academy split one combined digital property into two audience-focused sites.

BEFORE • Combined site

One destination

GRAMMY content + Recording Academy institutional content lived under one digital experience.

Split date: Feb 1, 2022

AFTER • GRAMMYs

Consumer / awards

Award-show, artist, music and entertainment content for a broad public audience.

AFTER • Recording Academy

Industry / institution

Professional, membership and organizational content serving the music community.

Decision criteria

Pages/session • Bounce rate • Session duration • Age mix

The split improved depth of engagement — especially on Recording Academy

Interpretation: the two-site structure appears to reduce immediate exits and encourage deeper navigation, but GRAMMY.com should improve content pathways that keep users on-site longer.

AUDIENCE SEGMENTATION

The two sites serve measurably different age profiles

Age composition supports distinct content strategies rather than a one-size-fits-all experience.

WHAT STANDS OUT

- Recording Academy over-indexes among visitors ages 25–44.
- GRAMMYs over-indexes among visitors ages 55+, though these groups are a smaller share overall.
- 18–24 and 45–54 audiences are nearly evenly distributed between the sites.

Implication

Different audience mixes create room for differentiated content, navigation and campaign strategy.

TRAFFIC CONCENTRATION

The GRAMMY Awards create a massive annual traffic spike

The strategic challenge is converting event-driven attention into year-round engagement.

AVG. DAILY VISITORS — REGULAR DAYS

32.4K

Across non-awards nights

AVG. DAILY VISITORS — AWARDS NIGHT

1.39M

≈43× regular-day traffic

43×

more average daily visitors
on awards night vs. regular days

Observed traffic pattern

Major peaks generally align with the annual awards cycle, with additional seasonal spikes around other high-interest moments.

Business opportunity

Build stronger cross-site journeys and retention loops before, during and after awards week.

RECOMMENDATION

Keep the sites separate: optimize as complementary products

The engagement and demographic evidence supports the two-site structure, with targeted improvements for GRAMMY.com.

RECOMMENDATION

Maintain separate domains, differentiate audience strategy, and strengthen cross-site pathways.

1 Maintain

Preserve the two-site architecture while monitoring whether engagement gains persist over time.

2 Differentiate

Tailor content and campaigns to each site's target audience age group.

3 Improve

Increase GRAMMY.com session duration with stronger related-content modules, evergreen features and cross-linking.

Success metrics to monitor: pages/session • bounce rate • session duration • repeat visits • cross-domain referral rate

PROJECT TOOLKIT

From raw web analytics to a business recommendation

A compact end-to-end analysis demonstrating technical execution and decision-oriented communication.

Data preparation

Loaded and inspected multiple CSV datasets; split pre/post periods; renamed, merged and concatenated DataFrames.

Analysis

Engineered pages/session and bounce-rate metrics; aggregated visitor behavior; compared engagement and demographic segments.

Communication

Built Plotly visualizations, interpreted KPI movement and translated findings into a strategic recommendation.

TOOLS

Python / pandas / Plotly / Jupyter Notebook

Portfolio takeaway

Used behavioral data to evaluate a real digital product decision and recommend a measurable path forward.
